## **SET 4 – Mechanical Properties of Solids**

---

1. The property by virtue of which a body opposes deformation is called —

- (a) Rigidity
  - (b) Elasticity
  - (c) Plasticity
  - (d) Brittleness
- 

2. When a deforming force is removed and the body regains its original shape, the behavior is —

- (a) Elastic
  - (b) Plastic
  - (c) Brittle
  - (d) Flexible
- 

3. Stress is defined as —

- (a) Force per unit area
  - (b) Area per unit force
  - (c) Force  $\times$  area
  - (d) Force  $\times$  displacement
- 

4. Strain is defined as —

- (a) Change in dimension/original dimension
  - (b) Force/area
  - (c) Stress  $\times$  strain
  - (d) Area  $\times$  force
- 

5. The unit of stress is —

- (a)  $\text{N/m}^2$
  - (b)  $\text{J/m}^3$
  - (c)  $\text{N/m}$
  - (d)  $\text{m/s}^2$
- 

6. The unit of strain is —

- (a) Dimensionless
- (b)  $\text{N/m}^2$
- (c)  $\text{J/m}^3$
- (d)  $\text{m/N}$

# **CLASS XI PHY CH: 8**

---

**7.** Hooke's law states —

- (a) Stress  $\propto$  Strain within elastic limit
  - (b) Stress  $\propto$  Strain<sup>2</sup>
  - (c) Stress  $\propto$  1/Strain
  - (d) Stress = constant
- 

**8.** The slope of the stress–strain curve gives —

- (a) Young's modulus
  - (b) Bulk modulus
  - (c) Poisson's ratio
  - (d) Shear modulus
- 

**9.** The point up to which Hooke's law is valid is —

- (a) Proportional limit
  - (b) Elastic limit
  - (c) Yield point
  - (d) Breaking point
- 

**10.** The maximum stress up to which the material returns to its original shape is —

- (a) Elastic limit
  - (b) Yield point
  - (c) Proportional limit
  - (d) Ultimate point
- 

**11.** The stress corresponding to permanent deformation is —

- (a) Yield stress
  - (b) Elastic stress
  - (c) Breaking stress
  - (d) Limiting stress
- 

**12.** The stress corresponding to breaking of a material is —

- (a) Breaking stress
  - (b) Yield stress
  - (c) Limiting stress
  - (d) Critical stress
-

# **CLASS XI PHY CH: 8**

**13.** The slope of the linear part of stress–strain curve is —

- (a) Modulus of Elasticity
  - (b) Bulk modulus
  - (c) Modulus of rigidity
  - (d) Poisson's ratio
- 

**14.** The work done per unit volume to stretch a wire is —

- (a)  $\frac{1}{2} \times \text{Stress} \times \text{Strain}$
  - (b) Stress  $\times$  Strain
  - (c) Stress / Strain
  - (d) Strain / Stress
- 

**15.** If a wire of length  $L$  and cross-section  $A$  is stretched by a force  $F$ , the longitudinal stress is —

- (a)  $F/A$
  - (b)  $A/F$
  - (c)  $F/L$
  - (d)  $F \times L$
- 

**16.** The ratio of lateral strain to longitudinal strain is —

- (a) Poisson's ratio
  - (b) Bulk modulus
  - (c) Modulus of rigidity
  - (d) Elastic limit
- 

**17.** The maximum value of Poisson's ratio is —

- (a) 0.5
  - (b) 1
  - (c) 0
  - (d) 2
- 

**18.** The Poisson's ratio for cork is nearly —

- (a) 0
  - (b) 0.5
  - (c) 0.25
  - (d) 1
-

# **CLASS XI PHY CH: 8**

**19.** A body is said to be perfectly rigid if —

- (a) Its deformation is zero
  - (b) It is flexible
  - (c) It has zero mass
  - (d) It has infinite strain
- 

**20.** A perfectly plastic body has —

- (a) Zero modulus of elasticity
  - (b) Infinite modulus of elasticity
  - (c) Constant modulus
  - (d) Finite modulus
- 

**21.** The ratio of stress to strain is —

- (a) Modulus of Elasticity
  - (b) Bulk modulus
  - (c) Shear modulus
  - (d) Poisson's ratio
- 

**22.** The unit of Young's modulus is —

- (a)  $\text{N/m}^2$
  - (b)  $\text{N/m}^3$
  - (c)  $\text{J/m}^3$
  - (d)  $\text{m}^2/\text{N}$
- 

**23.** The dimensional formula of stress is —

- (a)  $[\text{ML}^{-1}\text{T}^{-2}]$
  - (b)  $[\text{MLT}^{-2}]$
  - (c)  $[\text{M}^{-1}\text{L}^3\text{T}^{-2}]$
  - (d)  $[\text{M}^0\text{L}^0\text{T}^0]$
- 

**24.** The Young's modulus of steel is approximately —

- (a)  $2 \times 10^{11} \text{ N/m}^2$
  - (b)  $2 \times 10^9 \text{ N/m}^2$
  - (c)  $2 \times 10^7 \text{ N/m}^2$
  - (d)  $2 \times 10^5 \text{ N/m}^2$
-

# **CLASS XI PHY CH: 8**

**25.** Steel is more elastic than rubber because —

- (a) Y of steel is greater
  - (b) Y of rubber is smaller
  - (c) Both (a) and (b)
  - (d) None
- 

**26.** Bulk modulus is defined as —

- (a) Volume stress / Volume strain
  - (b) Stress / Strain
  - (c) Shear stress / Shear strain
  - (d) Force / Area
- 

**27.** For a fluid, the modulus of rigidity is —

- (a) Zero
  - (b) Infinite
  - (c) Finite
  - (d) None
- 

**28.** Bulk modulus of an incompressible liquid is —

- (a) Infinite
  - (b) Zero
  - (c) Small
  - (d) Constant
- 

**29.** The SI unit of bulk modulus is —

- (a)  $\text{N/m}^2$
  - (b)  $\text{J/m}^3$
  - (c)  $\text{N/m}^3$
  - (d)  $\text{m}^2/\text{N}$
- 

**30.** The relationship between Y, K, and G is —

- (a)  $Y = 9KG / (3K + G)$
  - (b)  $Y = 3KG / (3K + G)$
  - (c)  $Y = 2KG / (3K - G)$
  - (d)  $Y = K + G$
-

# **CLASS XI PHY CH: 8**

**31.** The relationship among  $Y$ ,  $K$ , and Poisson's ratio ( $\sigma$ ) is —

- (a)  $Y = 3K(1 - 2\sigma)$
  - (b)  $Y = K(1 - \sigma)$
  - (c)  $Y = 9K(1 + \sigma)$
  - (d)  $Y = 2K(1 + \sigma)$
- 

**32.** The maximum stress a material can bear is called —

- (a) Breaking stress
  - (b) Yield stress
  - (c) Elastic stress
  - (d) Ultimate stress
- 

**33.** The ratio of change in volume to original volume is —

- (a) Volumetric strain
  - (b) Shear strain
  - (c) Longitudinal strain
  - (d) Lateral strain
- 

**34.** For gases, bulk modulus is —

- (a) Very small
  - (b) Very large
  - (c) Infinite
  - (d) Constant
- 

**35.** The area under the stress–strain curve represents —

- (a) Energy stored per unit volume
  - (b) Force per unit area
  - (c) Pressure per unit volume
  - (d) Work per unit time
- 

**36.** The Poisson's ratio of steel is about —

- (a) 0.3
  - (b) 0.5
  - (c) 0
  - (d) 1
-

# **CLASS XI PHY CH: 8**

**37.** The Poisson's ratio for an incompressible material is —

- (a) 0.5
  - (b) 0
  - (c) 0.25
  - (d) 1
- 

**38.** The modulus of rigidity is also known as —

- (a) Shear modulus
  - (b) Bulk modulus
  - (c) Tangential modulus
  - (d) Elastic modulus
- 

**39.** Rubber is less elastic because —

- (a) It has small Young's modulus
  - (b) It stretches more for the same stress
  - (c) It obeys Hooke's law poorly
  - (d) All of these
- 

**40.** Elastic potential energy per unit volume is given by —

- (a)  $\frac{1}{2} \times \text{Stress} \times \text{Strain}$
  - (b) Stress / Strain
  - (c) Strain / Stress
  - (d) Stress  $\times$  Strain
- 

**41.** The work done per unit volume is maximum at —

- (a) Breaking point
  - (b) Elastic limit
  - (c) Yield point
  - (d) Proportional limit
- 

**42.** The slope of the linear region of the stress–strain curve gives —

- (a) Young's modulus
  - (b) Shear modulus
  - (c) Bulk modulus
  - (d) Poisson's ratio
-

# **CLASS XI PHY CH: 8**

**43.** The region beyond the elastic limit is called —

- (a) Plastic region
  - (b) Elastic region
  - (c) Proportional region
  - (d) Yield region
- 

**44.** A perfectly rigid body has —

- (a) Infinite Young's modulus
  - (b) Zero Young's modulus
  - (c) Finite modulus
  - (d) Constant stress
- 

**45.** A perfectly plastic body has —

- (a) Zero modulus of elasticity
  - (b) Infinite modulus of elasticity
  - (c) Finite modulus
  - (d) None
- 

**46.** Stress and strain are —

- (a) Directly proportional within elastic limit
  - (b) Inversely proportional
  - (c) Equal always
  - (d) Independent
- 

**47.** The elastic limit of steel is —

- (a) High
  - (b) Low
  - (c) Zero
  - (d) Same as copper
- 

**48.** The stress–strain curve for brittle material is —

- (a) Steep and short
  - (b) Flat and long
  - (c) Parabolic
  - (d) Linear
-

# CLASS XI PHY CH: 8

49. The slope of stress–strain curve beyond elastic limit —

- (a) Decreases
  - (b) Increases
  - (c) Constant
  - (d) Becomes zero
- 

50. For a small strain, stress is proportional to —

- (a) Strain
  - (b) 1/Strain
  - (c) Strain<sup>2</sup>
  - (d) Constant
-
